SUMMARY

Computer Science student with strong proficiency in Java and Python, and hands-on experience in full-stack application development using React, Spring Boot, and MySQL. Skilled in designing and developing RESTful APIs, implementing secure authentication mechanisms (JWT, RBAC), and working with relational databases. Demonstrates solid understanding of object-oriented programming, backend development, and scalable system design, with a keen interest in building efficient and reliable software solutions.

EDUCATION

B.Tech in Computer Science & Engineering, SRKR Engineering College 2023–Present

Percentage: 83.5%

HSC (PCM), Sasi Junior College

2021–2023

Percentage: 95.7%

TECHNICAL SKILLS

- **Languages:** Java, Python, C, SQL
- **Web Technologies:** HTML, CSS, JavaScript
- **Frameworks:** React, Spring Boot
- **Tools:** Git, GitHub, VS Code, Jupyter Notebook
- **Concepts:** Object-Oriented Programming (OOP), DBMS, REST APIs, JWT Authentication, RBAC
- **Problem Solving:** Solved 250+ problems on LeetCode, GeeksforGeeks, Coding Ninjas

PROJECTS

SN Shops Retail Dashboard

2026

Designed and developed a retail management system using React, Spring Boot, and MySQL to manage sales, expenses, inventory, and customers. Built REST APIs using layered architecture and implemented secure authentication using JWT and role-based access control (RBAC). Designed interactive dashboards for data visualization and utilized Docker for deployment. Handled multiple business modules including sales tracking, inventory management, and customer data management.

Student Management System

Developed a Java-based application with MySQL integration to manage student records efficiently. Implemented CRUD operations using JDBC for seamless database interaction and ensured structured data storage. Optimized SQL queries to improve data retrieval performance and incorporated input validation to maintain data integrity.

Weather Application

Developed a weather forecasting application using the OpenWeather API to fetch and display real-time weather data based on user input. Managed API requests, processed JSON responses, and implemented error handling for invalid inputs and network failures. Designed a clean interface to present temperature, humidity, and weather conditions effectively.

CERTIFICATIONS

- Programming Essentials in C – Cisco Networking Academy (2024)
- Python Essentials 1 & 2 – Cisco Networking Academy (2024)
- ML Xplore Workshop – Association of Computer Engineers (2025)
